To the Microsoft Hiring Team,

I'm writing to apply for the Software Engineer Internship. I'm a third-year MIET B.Tech Computer Science Engineering student with an ongoing Cyber Security Honors. Using Python, RAG pipelines, and prompt engineering, I am developing AI-based tools. Most recently, I am working on a project which is an assistant for an ongoing Google hackathon that focuses on education and is powered by the Gemini API. I'm also taking part in ISRO's Bharatiya Antariksh Hackathon.

I completely agree with Microsoft's emphasis on inclusive, significant innovation. Being a member of your engineering team would allow me to develop and contribute. I would appreciate your thought and time.

Regards,

Kritika Ojha
